DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 21, 26 and 27 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claims 21, 26 and 27 are drawn to a computer implemented process that merely manipulates data or an abstract idea, or merely solves a mathematical problem without a limitation to a practical application in the technological arts.

In order for a claimed invention to accomplish a practical application, it must produce a "useful, concrete and tangible result" *State Street*, 149 F.3d at 1373, 47 USPQ2d at 1601-02 (see MPEP 2106.II.A). A practical application can be achieved through recitation of "a physical transformation outside the computer for which a practical application in the technological arts is either disclosed in the specification or would have been known to a skilled artisan", or "limited to a practical application within the technological arts" (MPEP 2106 IVB2(b)). Currently, claims 21, 26 and 27 meet neither of these criteria. In order to for the claimed process to produce a "useful, concrete and tangible" result, recitation of one or more of the following elements is suggested:

- The manipulation of data that represents a physical object or activity transformed from outside the computer (MPEP 2106 IVB2(b)(i)).

Art Unit: 2622

- A recitation of a physical transformations outside the computer, for example in the form of pre or post computer processing activity (MPEP 2106 IVB2(b)(i)).
- A direct recitation of a practical application in the technological arts (MPEP 2106 IVB2(b)(ii)).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 12-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Sasaki (US 5,228,118).

With regard to claims 12, 16, 17, 21, 22, 24 and 26, Sasaki discloses an information processing apparatus (Figure 3, printing system) which can interpret a plurality of device control languages with respective priorities (col 5, lines 32-43), said information processing apparatus comprising: acquiring means (personal computer PC) for acquiring identification which specifies one of the plurality of device control languages with a highest priority (col 8, lines 1-4); and selection means for selecting from a plurality of programs a program corresponding to the device control language specified by the identification information acquired by said acquiring means (col 8, lines 1-23; lines 44-61).

With regard to claims 13 and 18 Sasaki discloses wherein if no program corresponds to the device control language specified by the identification information acquired by said acquiring means, said acquiring means acquires identification information which specifies a device control language with a second highest priority (col 8, lines 1-23).

With regard to claims 14 and 19 Sasaki discloses further comprising sending means for sending to the external apparatus an instruction for switching to the device control language corresponding to the program selected by said selection means (col 8, lines 44-61).

With regard to claims 15, 20, 23, 25 and 27, Sasaki discloses wherein the program comprises a printer driver to perform printing (col 8, lines 1-61).
